

# MKVToolNix -- Cross-platform tools for Matroska

MKVToolNix is a set of tools to create, alter and inspect Matroska files under Linux, other Unices and Windows.

## Installer

```
yum install mkvtoolnix mkvtoolnix-gui
```

Fedora 24-25

I host i386/i686 and x86\_64 binaries for Fedora 24 and 25 of MKVToolNix in dnf repositories.

I do not provide binaries for libEBML and libMatroska anymore as they're already part of the official distribution. If those are too old MKVToolNix even bundles the current version of both libraries.

In order to add the repository all you have to do is to execute the following two commands:

```
sudo rpm -Uvh https://mkvtoolnix.download/fedora/bunkus-org-repo-2-3.noarch.rpm
```

Afterwards you can install MKVToolNix with the following command:

```
sudo dnf install mkvtoolnix
```

My GPG key's ID is 16D2F5DC 10C052A6, and the fingerprint is EB24 BCA1 4BA6 A24F 1427 6FEE 16D2 F5DC 10C0 52A6.

You can also browse the download directories for your version: Fedora 23, Fedora 24 and Fedora 25.
